

Unipi Extension xS53

POPIS PRODUKTU

Unipi Extension xS53 is an extension module communicating via the RS485 serial interface with Modbus RTU protocol. The module is a simple and inexpensive method of extending your project by additional inputs & outputs. The xS53 features a set of analog inputs combined with a set of digital and relay I/Os. This makes it ideal for more complex projects involving the measurement of analogue components.

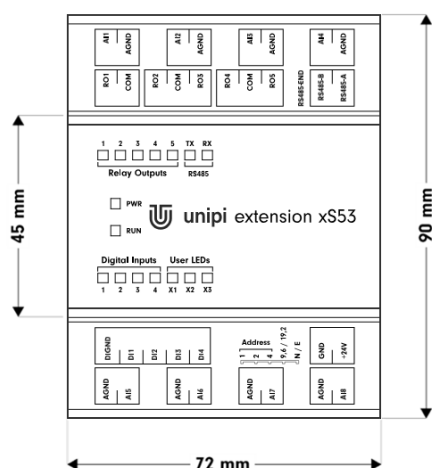

INPUTS & OUTPUTS

- 1 × RS485 Modbus RTU
- 4 × digital/counter input
- 5 × relay output
- 8 × analog input (voltage, current)

OTHER FEATURES

- Special functions
 - Direct Switch – automatic response to input value change
 - MasterWatchdog – switches outputs to a safe mode if communication with the PLC is interrupted
 - Configurable user LEDs
- Durable aluminium chassis (IP20)
- Available in OEM variant
