Automatic Chicken Coop Door

The Automatic Chicken Coop Door automatically opens and closes your chicken coop door on a time schedule you set. Motor easily connects to your coop door and automatically opens it every morning and closes it at night. Installs in minutes. Simply plug the motor into your lamp timer switch and the rest is automatic. It protects your hens and eggs, and saves you valuable time every day.

Features

- Connects to any type coop door: wood, metal, plastic. Install in about 15 minutes.
- Includes motor, mounting hardware, universal door connector, AC-DC Adapter, illustrated instructions.
- Works like a reversible motorized fishing reel. Opens and closes door smoothly in a few seconds.
- Fully adjustable motor stops door at open and closed positions you set. No counter-weight needed.
- Motor can lift and lower a door up to 10 pounds, with door openings up to 25 inches or more.
- Plug-in ready to your lamp timer switch. It is also X-10 compatible.

Benefits

- You decide what time your chicken coop door opens and closes – thereafter it's automatic!
- Sleep a little later. The D20 opens the door each morning allowing your hens to feed or free-range on their own.
- If you arrive home late, or if the weather is so poor you can't attend your coop on-time, relax because chickens enter the coop about the same time every day, and the D20 will automatically

close the door at the time you set.

- You can also set multiple door openings and closings each day. This can benefit in several ways. It can influence egg production by exposing hens to longer periods of daylight by preventing them from re-entering the coop too soon. It can foil small predators that sneak-in to steal eggs after your hens are out. And, it can help manage heat inside the coop.
- Raccoons, fox, dogs, cats, coyotes, etc. eventually give up and go elsewhere.
