

EZO-PMPTM

Embedded Dosing Pump

Flow rate **0.5ml to 105ml/min**

Accuracy **+/- 1%**

Modes of operation **Continuous dispensing
Volume dispensing
Constant flow rate
Dose over time mode**

Calibration **Single point**

Supplied tubing **61 cm**

Tubing size **Any 5mm O.D. tubing**

Data protocol **UART & I²C**

Default I²C address **103 (0x67)**

Operating voltage **3.3V – 5V (logic)
12V – 24V (motor)**

Pump head **2 meters**

Data format **ASCII**

VCC	3.3V	5V	5.5V
Motor	10.8V	12V	24V

Operating principle

- ✓ Self-priming
- ✓ Run dry

Operating modes

The EZO-PMP™ can operate in four different modes.

Continuous dispensing

Run the pump continuously
105 ml/min ∞ (with supplied tubing)

Constant flow rate

Pump a specific volume per minute

Volume dispensing

Pump a specific volume
(Smallest possible volume is 0.5 ml)

Dose over time mode

Pump a specific volume over a set time

Volume is always in ml.

This device requires two power supplies

3.3V–5.5V for the control system

12V–24V to drive the motor

The Atlas Scientific EZO-PMP™ consists of three main components.

Cassette

12 volt motor

Control system

The actual peristaltic pumping is done within the cassette. It has been designed to be easily detached from the motor and disassembled.

The 12 volt motor and control system have been soldered together. Both components are designed to operate as one single unit.

The control system has three main components

- Keyed data and power connector
- 12–24 volt power input
- Status indicator LED

Data and power cable pinout

- | | | |
|-------|---|--------|
| White | – | RX/SCL |
| Green | – | TX/SDA |
| Black | – | GND |
| Red | – | VCC |
| Blue | – | INT |

Pump speed vs. voltage

There is no change in pump speed at different voltages.

Interrupt pin

When the pump is dispensing the interrupt pin goes high.

Removing cassette

Turn cassette counterclockwise until it stops.

Pull cassette off the motor.

Removing tube assembly

The inner workings of the cassette are fragile and must be dismantled by hand. Using tools can damage or break the cassette.

Installing new tube assembly

3

Push the tube holder along with the greased and marked pump tube into the cassette until it clicks.

4

Gently pull out the pump tube, and insert the rotor into the pump tube. Align pump tube and rotor with the cassette axle.

✓ Correct

✗ Incorrect

Once the tubing has been replaced, run the pump for 3–5 minutes to break in the new tubing. **Remember, this pump can be run dry and does not need to pump liquid for the 3–5 minute break in period.**

Calibration theory

Uncalibrated accuracy +/- 5%

Calibrated accuracy +/- 1%

Before calibration is attempted all the air bubbles should be removed from the tubing. This is done by running the pump while tapping the tubing. If air bubbles are not removed from the tubing they will slowly group together into larger air bubbles. Over time this will lead to accuracy issues.

Calibration types

Volume calibration

Volume over time calibration

Calibration is optional. Both types of calibration are independent of each other and can be done at any time. Calibration can be done at any volume however; Atlas Scientific recommends using volumes above 5ml.

Equipment needed for calibration

An accurate graduated cylinder of at least 10ml.

Or

An accurate scale with a resolution of at least 0.1 grams

1 gram of water = 1ml
23.56 grams of water = 23.56ml

Calibration procedure

Calibration should be done with water and not a chemical

Make sure the tubing is full of water and has no bubbles before calibrating.

1. Instruct the pump to dispense a volume of water.
2. Measure the dispensed amount to determine how much water was actually dispensed.
3. Calibrate the pump by sending it the volume of liquid you have measured.

Example

Calibrate the pump by dispensing 10ml

1. Instruct the pump to dispense 10ml into a graduated cylinder or beaker on a scale.
2. Measure the amount of liquid that was actually dispensed.
3. Inform the pump how much liquid was actually dispensed.
4. Calibration is now complete.

Once the pump has been calibrated it will accurately dispense any volume of liquid. It has not been calibrated specifically to the volume used during the calibration procedure (10 ml). It has now been calibrated to all volumes.

Use the same procedure to perform a volume over time calibration.

Accuracy

Uncalibrated accuracy +/- 5%

Calibrated accuracy +/- 1%

Volume dispensing mode

calibrated at 10ml

Dose over time mode

calibrated at 10ml over 90 seconds

Pump head

Pump head refers to the maximum vertical height a pump can dispense. The EZO-PMP™ has a pump head of 2 meters (6.5').

Change to I²C mode

Command syntax

Default I²C address 103 (0x67)

I2C,n <cr> sets I²C address and reboots into I²C mode

n = any number 1 – 127

Example

I2C,100 <cr>

Response

*OK (reboot in I²C mode)

Wrong example

I2C,139 <cr> n ≠ 127

Response

*ER <cr>

I2C,100

Green

*OK <cr>

(reboot)

Blue

now in I²C mode

Manual switching to I²C

- Make sure Plock is set to 0
- Disconnect ground (power off)
- Disconnect TX and RX
- Connect TX to INT
- Confirm RX is disconnected
- Connect ground (power on)
- Wait for LED to change from **Green** to **Blue**
- Disconnect ground (power off)
- Reconnect all data and power

Manually switching to I²C will set the I²C address to 103 (0x67)

Example

Wrong Example

I²C mode

The I²C protocol is **considerably more complex** than the UART (RS-232) protocol. Atlas Scientific assumes the embedded systems engineer understands this protocol.

To set your EZO-PMP™ into I²C mode [click here](#)

Dec ASCII Dec

Response codes

After a command has been issued, a 1 byte response code can be read in order to confirm that the command was processed successfully.

Reading back the response code is completely optional, and is not required for normal operation.

Example

```
I2C_start;  
I2C_address;  
I2C_write(EZO_command);  
I2C_stop;
```

delay(300);

Processing delay

```
I2C_start;  
I2C_address;  
Char[ ] = I2C_read;  
I2C_stop;
```

If there is no processing delay or the processing delay is too short, the response code will always be 254.

Response codes

Single byte, not string

255	no data to send
254	still processing, not ready
2	syntax error
1	successful request

reports maximum possible flow rate

[ml/min] = a single number (int or float) representing the desired flow rate

[min or *] = the number of minutes to run or (*) indefinitely

A negative value for ml/min = reverse

Example

DC,25,40

Response

1
Dec

0
Null

Dispense 25ml per minute
for 40 minutes

DC,?

1
Dec

?maxrate,58.5
ASCII

0
Null

The maximum flow rate is determined after calibration.
If the flowrate entered is too fast the EZO-PMP™ will send an error.

*TOOFAST

*ER

Pause dispensing

300ms  processing delay

Command syntax

Issue the command again to resume dispensing

P pauses the pump during dispensing

P,? pause status

Example

Response

P

 **Wait 300ms** **1** **0**
Dec Null

P,?

 **Wait 300ms** **1** **?P,1** **0** or  **Wait 300ms** **1** **?P,0** **0**
Dec ASCII Null
paused unpaused

dispensing

paused

dispensing

Stop dispensing

Command syntax

300ms  processing delay

X stop dispensing

Example

X

Response

Wait 300ms

1
Dec

*DONE,v
ASCII

0
Null

v = volume dispensed

Total volume dispensed

Command syntax

300ms  processing delay

TV,? shows total volume dispensed

ATV,? absolute value of the total volume dispensed

Clear clears the total dispensed volume

Example

Response

TV,?

 **Wait 300ms** **1** **?total,623.00** **0**
Dec ASCII Null

ATV,?

 **Wait 300ms** **1** **?total,434.50** **0**
Dec ASCII Null

clear

 **Wait 300ms** **1** **0** **total now 0.00**
Dec Null

Calibration

Command syntax

300ms  processing delay

Calibrate to the actual volume dispensed.

- Cal,v v = corrected volume
- Cal,clear delete calibration data
- Cal,? device calibrated?

Example

Response

Cal,24.01

Wait 300ms

1
Dec

0
Null

Cal,clear

Wait 300ms

1
Dec

0
Null

Cal,?

Wait 300ms

1
Dec

?Cal,0
ASCII

0
Null

uncalibrated

Enable/disable parameters from output string

Command syntax

300ms  processing delay

O, [parameter],[1,0] enable or disable output parameter
O,? enabled parameter?

Example

Response

O,V,1

 **Wait 300ms** **1** **0** enable volume being pumped
Dec Null

O,TV,0

 **Wait 300ms** **1** **0** disable total volume pumped
Dec Null

O,ATV,1

 **Wait 300ms** **1** **0** enable absolute volume pumped
Dec Null

O,?

 **Wait 300ms** **1** **? , O , V , TV , ATV** **0** if all three are enabled
Dec ASCII Null

Pump voltage

Command syntax

300ms  processing delay

PV,? check pump voltage

Example

Response

PV,?

Wait 300ms

1

Dec

?PV,13.86

ASCII

0

Null

Response breakdown

?PV, 13.86

Pump input voltage

Device information

Command syntax

300ms  processing delay

i device information

Example

i

Response

 **Wait 300ms** **1** **?i,PMP, 1.1** **0**
Dec ASCII Null

Response breakdown

?i, PMP, 1.1
↑ ↑
Device Firmware

Reading device status

Command syntax

300ms  processing delay

Status voltage at Vcc pin and reason for last restart

Example

Response

Status

1

Dec

?Status,P,5.038

ASCII

0

Null

Response breakdown

?Status,

P,

↑
Reason for restart

5.038

↑
Voltage at Vcc

Restart codes

P	powered off
S	software reset
B	brown out
W	watchdog
U	unknown

Sleep mode/low power

Command syntax

Sleep enter sleep mode/low power

Send any character or command to awaken device.

Example

Response

Sleep

no response

Do not read status byte after issuing sleep command.

Any command

wakes up device

	STANDBY	SLEEP
5V	13.4 mA	0.415 mA
3.3V	12.4 mA	0.13 mA

Standby

Sleep

Sleep

Protocol lock

Command syntax

300ms  processing delay

Plock,1 enable Plock

Plock,0 disable Plock

Plock,? Plock on/off?

default

Locks device to I²C mode.

Example

Response

Plock,1

 Wait 300ms
1 0
Dec Null

Plock,0

 Wait 300ms
1 0
Dec Null

Plock,?

 Wait 300ms
1 ?Plock,1 0
Dec ASCII Null

Plock,1

Baud, 9600

cannot change to UART

cannot change to UART

I²C address change

Command syntax

300ms  processing delay

I2C,n sets I²C address and reboots into I²C mode

Example

Response

I2C,101

device reboot

Warning!

Changing the I²C address will prevent communication between the circuit and the CPU, until the CPU is updated with the new I²C address.

Default I²C address is 103 (0x67).

n = any number 1 – 127

I2C,101

(reboot)

Factory reset

Command syntax

Factory reset will not take the device out of I²C mode.

Factory enable factory reset

I²C address will not change

Example

Response

Factory

device reboot

Clears calibration
LED on
Response codes enabled

Factory

(reboot)

Change to UART mode

Command syntax

Baud,n switch from I²C to UART

Example

Baud,9600

Response

reboot in UART mode

n = [300
1200
2400
9600
19200
38400
57600
115200

Manual switching to UART

- Make sure Plock is set to 0
- Disconnect ground (power off)
- Disconnect TX and RX
- Connect TX to INT
- Confirm RX is disconnected
- Connect ground (power on)
- Wait for LED to change from Blue to Green
- Disconnect ground (power off)
- Reconnect all data and power

Mounting the EZO-PMP™

There are a many different ways to mount the EZO-PMP™ Embedded Dosing Pump. If you have a 3D printer you can use the dosing pump stand we created, by clicking [here](#). The dosing pump stand has been measured to perfectly fit the EZO-PMP™ and even has screw holes in place for you to help mount the dosing pump to the stand. Feel free to modify this stand design as needed.

However, if you would like to mount the EZO-PMP™ Embedded Dosing Pump into other materials, you will need the following tools:

Either are fine to make the larger hole.

Perfect for screw holes.

Datasheet change log

Datasheet V 1.4

Revised definition of response codes on pg 47.

Datasheet V 1.3

Revised art and added pump head information on pg 11.

Datasheet V 1.2

Revised Plock pages to show default value.

Datasheet V 1.1

Added mounting information on pg 70.

Firmware updates

V1.0 – Initial release (April 28, 2017)

Warranty

Atlas Scientific™ Warranties the EZO-PMP™ Embedded Dosing Pump to be free of defect during the debugging phase of device implementation, or 30 days after receiving the EZO-PMP™ Embedded Dosing Pump (whichever comes first).

The debugging phase

The debugging phase as defined by Atlas Scientific™ is the time period when the EZO-PMP™ Embedded Dosing Pump is inserted into a bread board, or shield. If the EZO-PMP™ Embedded Dosing Pump is being debugged in a bread board, the bread board must be devoid of other components. If the EZO-PMP™ Embedded Dosing Pump is being connected to a microcontroller, the microcontroller must be running code that has been designed to drive the EZO-PMP™ Embedded Dosing Pump exclusively and output the EZO-PMP™ Embedded Dosing Pump data as a serial string.

It is important for the embedded systems engineer to keep in mind that the following activities will void the EZO-PMP™ Embedded Dosing Pump warranty:

- **Soldering any part of the EZO-PMP™ Embedded Dosing Pump.**
- **Running any code, that does not exclusively drive the EZO-PMP™ Embedded Dosing Pump and output its data in a serial string.**
- **Embedding the EZO-PMP™ Embedded Dosing Pump into a custom made device.**
- **Removing any potting compound.**

Reasoning behind this warranty

Because Atlas Scientific™ does not sell consumer electronics; once the device has been embedded into a custom made system, Atlas Scientific™ cannot possibly warranty the EZO-PMP™ Embedded Dosing Pump, against the thousands of possible variables that may cause the EZO-PMP™ Embedded Dosing Pump to no longer function properly.

Please keep this in mind:

- 1. All Atlas Scientific™ devices have been designed to be embedded into a custom made system by you, the embedded systems engineer.**
- 2. All Atlas Scientific™ devices have been designed to run indefinitely without failure in the field.**
- 3. All Atlas Scientific™ devices can be soldered into place, however you do so at your own risk.**

Atlas Scientific™ is simply stating that once the device is being used in your application, Atlas Scientific can no longer take responsibility for the EZO-PMP™ Embedded Dosing Pumps continued operation. This is because that would be equivalent to Atlas Scientific™ taking responsibility over the correct operation of your entire device.
