

# EZO-CO<sub>2</sub><sup>TM</sup>

## Embedded NDIR CO<sub>2</sub> Sensor

Reads	<b>Gaseous CO<sub>2</sub></b>
Range	<b>0 – 10,000 ppm</b>
Calibration	<b>Factory calibrated</b>
Response time	<b>1 reading per second</b>
Resolution	<b>1 ppm</b>
Accuracy	<b>+/- 5%   +/- 50 ppm</b>
Connector	<b>5 lead data cable</b>
Warmup time	<b>10 seconds</b>
Cable length	<b>1 meter</b>
Data protocol	<b>UART &amp; I<sup>2</sup>C</b>
Default I <sup>2</sup> C address	<b>105 (0x69)</b>
Data format	<b>ASCII</b>
Operating voltage	<b>3.3V – 5V</b>
Life expectancy	<b>~5.5 years</b>

# Attention

The EZO-CO2™ is 100% operational out of the box.  
**CALIBRATION IS UNNECESSARY**

This sensor detects  
**GASEOUS CO2**

**X**

This sensor does not  
read dissolved CO2.  
**DO NOT SUBMERGE!**

# Attention

Do not point the sensor directly at bright lights

**This CO2 sensor uses IR light to detect CO2.**

**Pointing the sensor directly at a bright light will give false readings.  
(it will not damage the sensor.)**

**If the CO2 sensor is returning false readings when in a bright environment, try attaching a PVC Tee to the sensor, to block the direct light.**

**(or just don't point the sensor at bright lights.)**

# Attention

## This CO2 sensor is sensitive to ground loops.

Put simply, a ground loop is when the ground line is not actually 0 volts. (It's the buzzing you hear in audio equipment)

If your system has a ground loop you will see readings that are between 100 and 250 ppm higher than expected. Atlas Scientific has detected ground loops on many different Raspberry Pi's. If this sensor is connected to a Raspberry Pi you should expect to have a ground loop.

### There are two ways to fix this problem

1. Connect a ground pin from the Raspberry Pi (or other device) to an earth ground.
2. Connect the body of the CO2 sensor to a metal object that is connected to an earth ground.

# Operating principle

The Atlas Scientific EZO-CO2™ Embedded CO2 Sensor uses a non-dispersive infra-red (NDIR) gas detection cell to derive CO2 content in a gaseous matrix. The NDIR detection cell is a single wavelength spectrophotometer that has been specifically designed to detect 4.2µm infrared radiation.

Gaseous CO2 has a prominent absorption band centered at 4.2µm. CO2 content is derived by quantifying how much light energy has been lost when it travels through a gaseous matrix over a fixed distance.

# Physical properties

The EZO-CO<sub>2</sub>™ sensor only detects gaseous CO<sub>2</sub> levels. This device cannot read dissolved CO<sub>2</sub> levels. **DO NOT SUBMERGE IN LIQUID.**

**Weight** 133g

**Body** 316 Stainless Steel

1<sup>1</sup>/<sub>16</sub>"  
27mm

# Sensor properties

# Pin out

## Data and power cable pinout

White – RX/SCL  
Green – TX/SDA  
Black – GND  
Red – VCC  
Blue – ALM

The alarm pin will go high when a set CO2 level has been crossed.

If unused leave **ALM** floating. Do not connect **ALM** to **VCC** or **GND**.

See page **23** to enable CO2 level alarm in UART mode.

See page **48** to enable CO2 level alarm in I2C mode.

## Power consumption

	LED	MAX	SLEEP
5V	ON	45 mA	3.4 mA
	OFF	44 mA	
3.3V	ON	42 mA	3.0 mA
	OFF	41 mA	

## Absolute max ratings

Parameter	MIN	TYP	MAX
Storage temperature	-65 °C		75 °C
Operational temperature	-20 °C	25 °C	50 °C
VCC	3.3V	3.3V	5.5V

Humidity Range 0 to 95% rh non-condensing

# Sensor warm-up

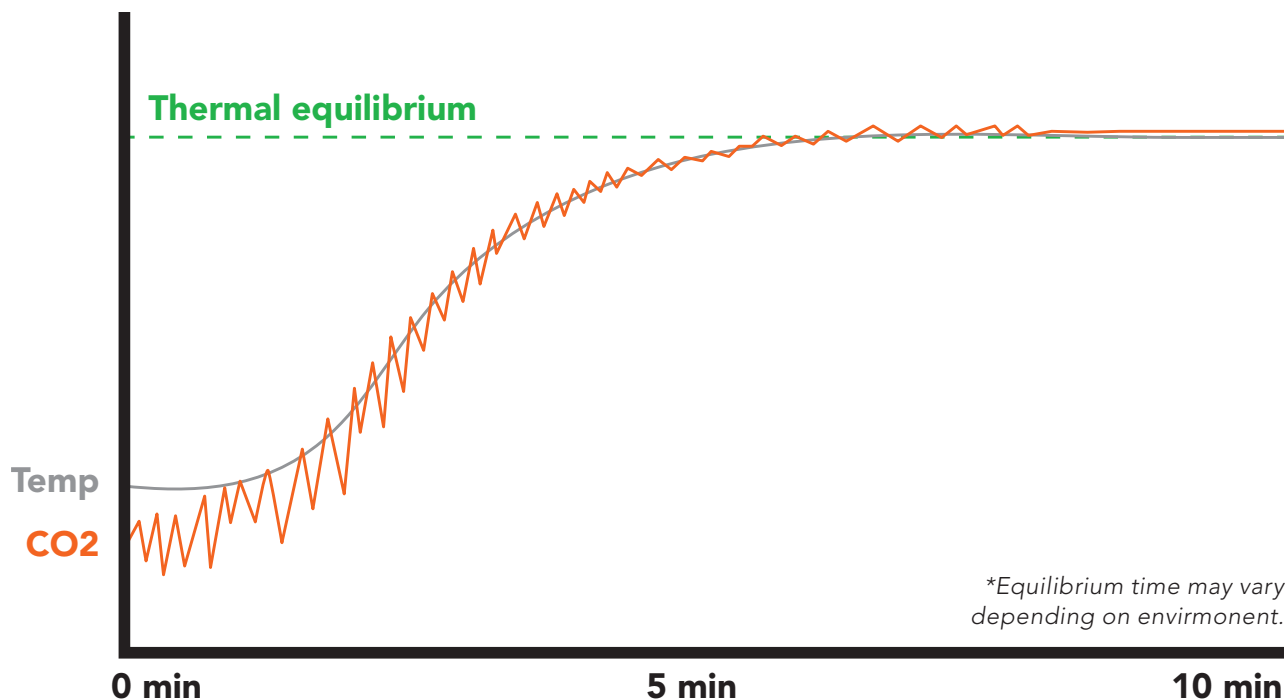

When the Atlas Scientific EZO-CO2™ Embedded CO2 Sensor is first powered on (or wakes up from sleep mode) the sensor must warm-up before it can output readings. The warm-up process takes 10 seconds to complete.

**10 sec**

During the first 10 seconds of operation the output will be: **\*warm**

Once warming is finished, CO2 readings will be output. The device will continue to warm-up over several minutes. As the internal temperature stabilizes, so will the CO2 readings.

To see the internal temperature of the sensor and watch as it stabilizes, use the 'O' command found on page 24.

# Calibration theory

The Atlas Scientific EZO-CO2™ Embedded CO2 Sensor comes pre-calibrated, and does not need to be recalibrated. Atlas Scientific performs a two-point factory calibration as part of the manufacturing process.

Low point calibration = 0 ppm  
High point calibration = 4,000 ppm

The factory calibration data is permanently stored in the sensor and cannot be erased.

## Custom calibration

One or two-point calibration can be done at any time. When custom calibration is used, factory calibration will be ignored. To revert back to the factory calibration simply clear the custom calibration.

See page [24](#) or [49](#) for custom calibration commands.

# Alarm

## Command syntax

The alarm pin will = 1 when CO2 levels are > alarm set point. Alarm tolerance sets how far below the set point CO2 levels need to drop before the pin will = 0 again.

Alarm,en,[1,0]	<cr>	enable / disable alarm
Alarm,n	<cr>	sets alarm
Alarm,tol,n	<cr>	sets alarm tolerance (0 - 500 ppm)
Alarm,?	<cr>	alarm set?

## Example

## Response

Alarm,en,1 <cr>

\*OK <cr> Enable alarm

Alarm,1200 <cr>

\*OK <cr>

Alarm,tol,100 <cr>

\*OK <cr> CO2 level must fall 100 ppm below set point for alarm to reset.

Alarm,? <cr>

?,alarm,1200,100,1 <cr> if all are enabled

# Custom calibration

## Command syntax

High point calibration can be from 3,000 ppm to 5,000 ppm. Calibration outside of that range may lead to accuracy issues.

Cal,n	<cr>	calibrates the high point
Cal,0	<cr>	calibrates the zero point
Cal,clear	<cr>	restores calibration to factory settings
Cal,?	<cr>	device calibrated?

Example	Response
Cal,3900 <cr>	*OK <cr>
Cal,0 <cr>	*OK <cr>
Cal,clear <cr>	*OK <cr>
Cal,? <cr>	<div>?Cal,0 &lt;cr&gt; or ?Cal,1 &lt;cr&gt; or ?Cal,2 &lt;cr&gt; or</div> <div>no calibration                      only zero point calibration                      only high point calibration</div> <div>?Cal,3 &lt;cr&gt;    *OK &lt;cr&gt;</div> <div>zero and high point calibration</div>

This device comes pre-calibrated.  
Custom calibration should not be performed without scientific grade calibration gasses.

# Export calibration

## Command syntax

Export: Use this command to download calibration settings

**Export,?** <cr> calibration string info

**Export** <cr> export calibration string from calibrated device

## Example

## Response

**Export,?** <cr>

**10,120** <cr>

### Response breakdown

**10, 120**

# of strings to export

# of bytes to export

Export strings can be up to 12 characters long,  
and is always followed by <cr>

**Export** <cr>

**59 6F 75 20 61 72** <cr> **(1 of 10)**

**Export** <cr>

**65 20 61 20 63 6F** <cr> **(2 of 10)**

**(7 more)**

⋮

**Export** <cr>

**Export** <cr>

**\*DONE**

Disabling \*OK simplifies this process

**Export** <cr>

# Import calibration

## Command syntax

Import: Use this command to upload calibration settings to one or more devices.

Import,n <cr> import calibration string to new device

## Example

Import, 59 6F 75 20 61 72 <cr> (1 of 10)

Import, 65 20 61 20 63 6F <cr> (2 of 10)

⋮

Import, 6F 6C 20 67 75 79 <cr> (10 of 10)

## Response

\*OK <cr>

\*OK <cr>

⋮

\*OK <cr>

Import,n <cr>

\* If one of the imported strings is not correctly entered, the device will not accept the import, respond with \*ER and reboot.

# Enable/disable internal temperature from output string

## Command syntax

O,t,[1,0] <cr> enable or disable internal temperature

Example	Response
O,t,1 <cr>	*OK <cr> enable temperature
O,t,0 <cr>	*OK <cr> disable temperature
O,? <cr>	?O,ppm,t <cr> if internal temp is enabled

Enabling the internal temperature should only be used to confirm that the device is at thermal equilibrium. Refer to page 6

# Naming device

## Command syntax

Do not use spaces in the name

Name,n <cr> set name

Name, <cr> clears name

Name,? <cr> show name

n =

1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16

Up to 16 ASCII characters

## Example

# Change to I<sup>2</sup>C mode

## Command syntax

Default I<sup>2</sup>C address 105 (0x69)

I2C,n <cr> sets I<sup>2</sup>C address and reboots into I<sup>2</sup>C mode

n = any number 1 – 127

### Example

### Response

I2C,100 <cr>

\*OK (reboot in I<sup>2</sup>C mode)

### Wrong example

### Response

I2C,139 <cr> n ≠ 127

\*ER <cr>

I2C,100

(reboot)

**Green**  
\*OK <cr>

**Blue**  
now in I<sup>2</sup>C mode

# Manual switching to I<sup>2</sup>C

- Disconnect ground (power off)
- Disconnect TX and RX
- Connect TX to ALM
- Confirm RX is disconnected
- Connect ground (power on)
- Wait for LED to change from **Green** to **Blue**
- Disconnect ground (power off)
- Reconnect all data and power

Manually switching to I<sup>2</sup>C will set the I<sup>2</sup>C address to 105 (0x69)

## Example

## Wrong Example

# I<sup>2</sup>C mode

The I<sup>2</sup>C protocol is **considerably more complex** than the UART (RS-232) protocol. Atlas Scientific assumes the embedded systems engineer understands this protocol.

To set your EZO™ device into I<sup>2</sup>C mode [click here](#)

## Settings that are retained if power is cut

- Calibration
- Change I<sup>2</sup>C address
- Hardware switch to UART mode
- LED control
- Protocol lock
- Software switch to UART mode

## Settings that are **NOT** retained if power is cut

- Sleep mode

# I<sup>2</sup>C mode

**I<sup>2</sup>C address** (0x01 – 0x7F)  
**105 (0x69) default**

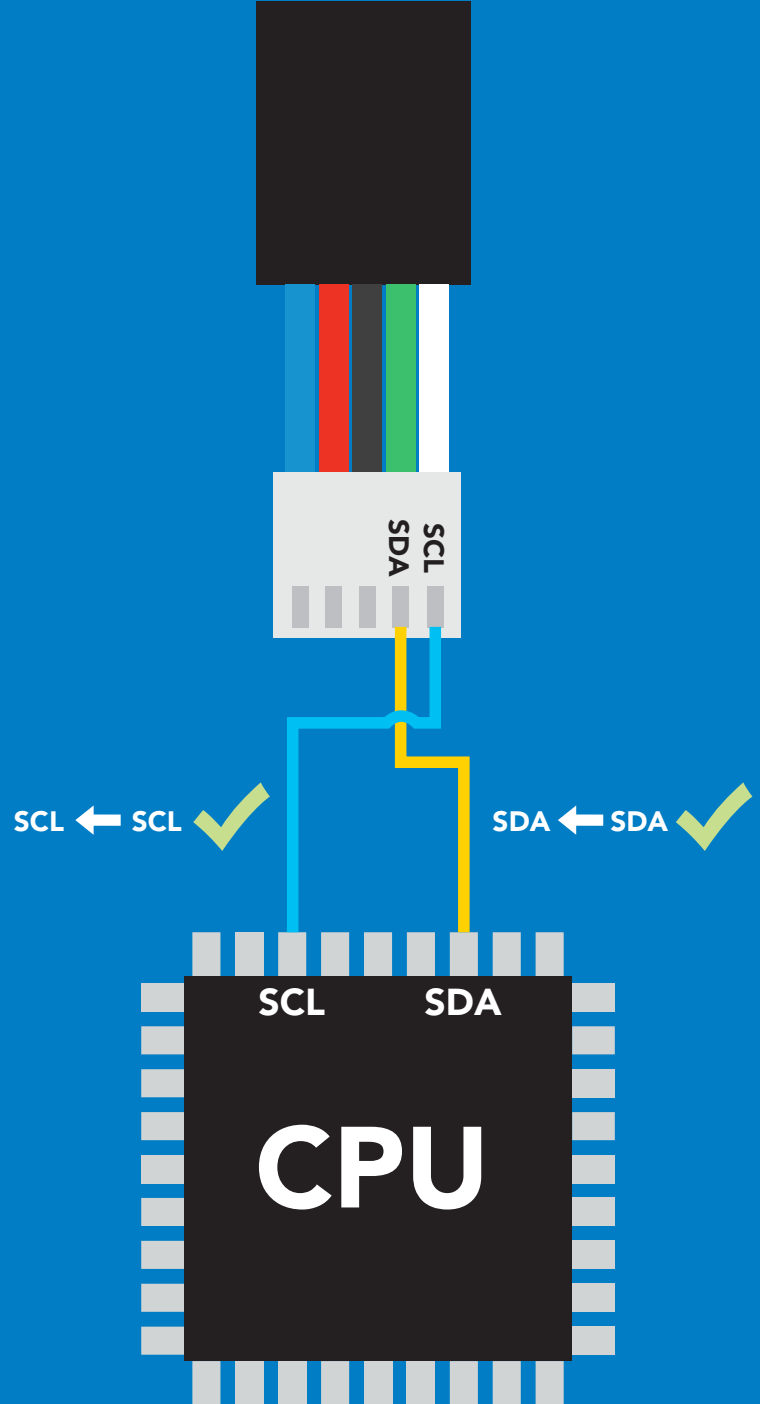

**Vcc** 3.3V – 5.5V

**Clock speed** 100 – 400 kHz

**SDA** 

**SCL** 

 VCC  
0V 0V

## Data format

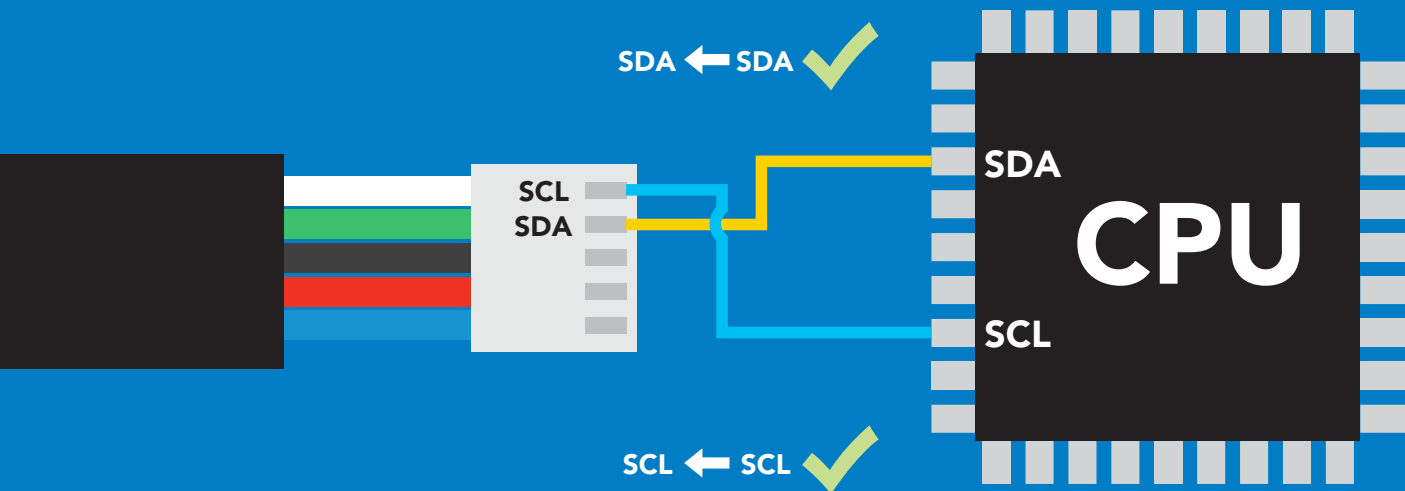

**Reading** Gaseous CO<sub>2</sub>  
**Units** PPM  
**Encoding** ASCII  
**Format** string

**Data type** unsigned int  
**Decimal places** 0  
**Smallest string** 2 characters  
**Largest string** 12 characters

# Sending commands to device

## Example

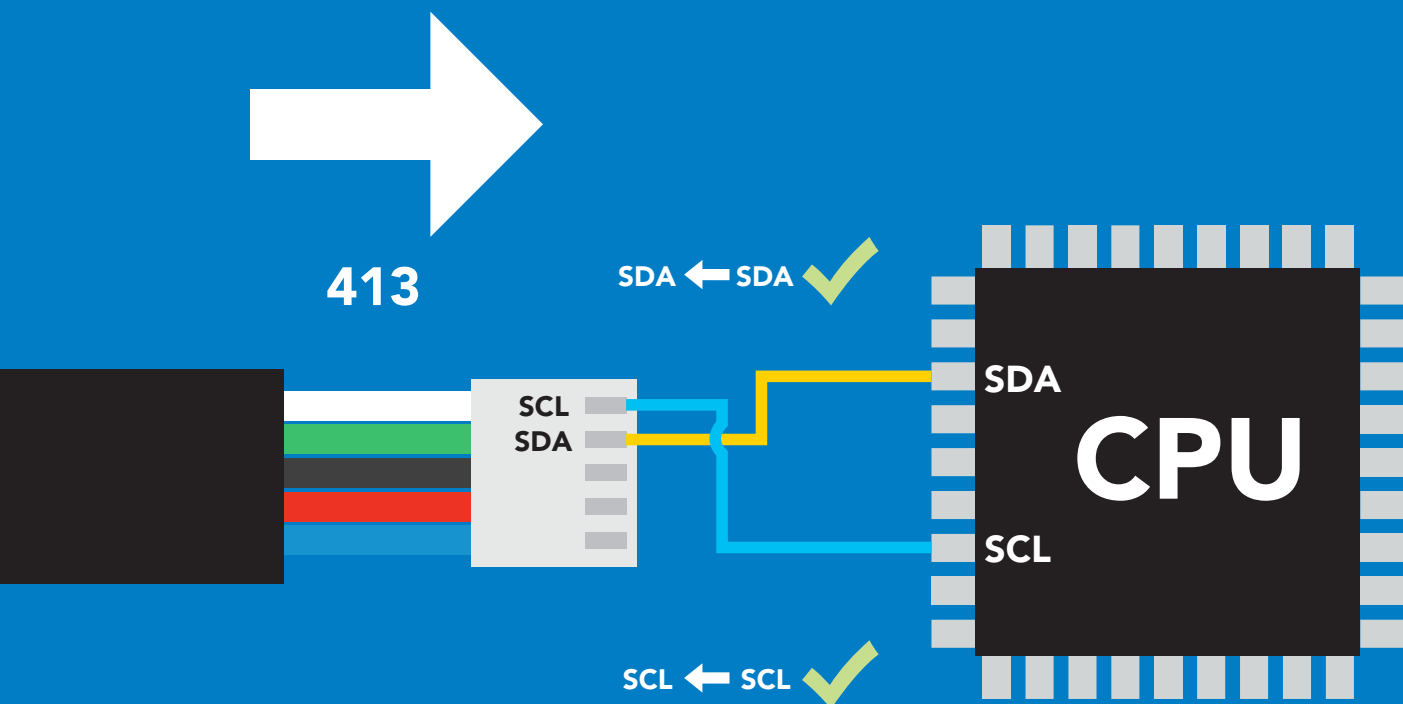

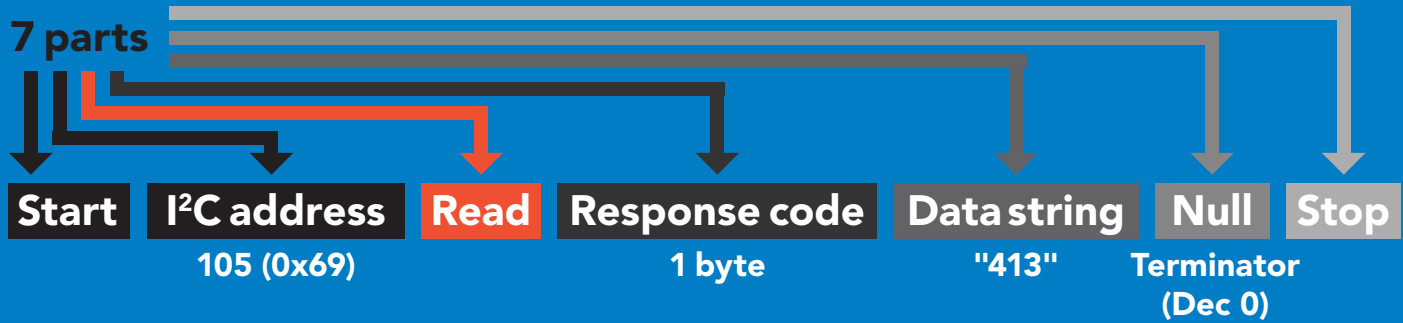

## Advanced

# Requesting data from device

## Advanced

1    52    49    51    0    = 413

Dec    ASCII    Dec

# Response codes & processing delay

After a command has been issued, a 1 byte response code can be read in order to confirm that the command was processed successfully.

*Reading back the response code is completely optional, and is not required for normal operation.*

## Example

```
I2C_start;  
I2C_address;  
I2C_write(EZO_command);  
I2C_stop;
```

**delay(300);**

**Processing delay**

```
I2C_start;  
I2C_address;  
Char[ ] = I2C_read;  
I2C_stop;
```

If there is no processing delay or the processing delay is too short, the response code will always be 254.

### Response codes

Single byte, not string

255	no data to send
254	still processing, not ready
2	syntax error
1	successful request

Dec

?Cal,2  
ASCII  
only high point calibration

0  
Null

or

1  
Dec

?Cal,3  
ASCII  
zero and high point calibration

0  
Null

This device comes pre-calibrated.  
Custom calibration should not be performed without scientific grade calibration gasses.

# Export calibration

300ms  processing delay

## Command syntax

Export: Use this command to download calibration settings

Export,? calibration string info

Export export calibration string from calibrated device

## Example

## Response

Export,?

 **Wait 300ms**    **1**    **10,120**    **0**  
Dec    ASCII    Null

### Response breakdown

**10, 120**  
↑    ↑  
# of strings to export    # of bytes to export

Export strings can be up to 12 characters long

Export

 **Wait 300ms**    **1**    **59 6F 75 20 61 72**    **0**    (1 of 10)  
Dec    ASCII    Null

Export

 **Wait 300ms**    **1**    **65 20 61 20 63 6F**    **0**    (2 of 10)  
Dec    ASCII    Null

⋮

Export

 **Wait 300ms**    **1**    **6F 6C 20 67 75 79**    **0**    (10 of 10)  
Dec    ASCII    Null

Export

 **Wait 300ms**    **1**    **\*DONE**    **0**  
Dec    ASCII    Null

# Import calibration

300ms  processing delay

## Command syntax

Import: Use this command to upload calibration settings to one or more devices.

Import,n    import calibration string to new device

## Example

Import, 59 6F 75 20 61 72    (1 of 10)

Import, 65 20 61 20 63 6F    (2 of 10)

⋮

Import, 6F 6C 20 67 75 79    (10 of 10)

## Response

 **1** **0**  
Wait 300ms    Dec    Null

 **1** **0**  
Wait 300ms    Dec    Null

⋮

 **1** **0**  
Wait 300ms    Dec    Null

Import,n

system will reboot

\* If one of the imported strings is not correctly entered, the device will not accept the import and reboot.

# Enable/disable internal temperature from output string

## Command syntax

300ms  processing delay

O,t,[1,0]      enable or disable internal temperature

### Example

### Response

O,t,1

 **Wait 300ms**    **1**    **0**  
Dec    Null

enable temperature

O,t,0

 **Wait 300ms**    **1**    **0**  
Dec    Null

disable temperature

O,?

 **Wait 300ms**    **1**    **?O,ppm,t**    **0**  
Dec    ASCII    Null

if internal temp  
is enabled

Enabling the internal temperature should only be used to confirm that the device is at thermal equilibrium. Refer to page 6

# Naming device

300ms  processing delay

## Command syntax

Do not use spaces in the name

Name,n set name

Name, clears name

Name,? show name

n =

1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16

Up to 16 ASCII characters

## Example

## Response

Name,

Wait 300ms

# Reading device status

## Command syntax

300ms  processing delay

Status voltage at Vcc pin and reason for last restart

## Example

## Response

Status

1

Dec

?Status,P,5.038

ASCII

0

Null

## Response breakdown

?Status,

P,

Reason for restart

5.038

Voltage at Vcc

### Restart codes

P	powered off
S	software reset
B	brown out
W	watchdog
U	unknown

# Sleep mode/low power

## Command syntax

**Sleep**    enter sleep mode/low power

Send any character or command to awaken device.

### Example

### Response

**Sleep**

**no response**

Do not read status byte after issuing sleep command.

**Any command**

**wakes up device**

	STANDBY	SLEEP
5V	45 mA	3.4 mA
3.3V	42 mA	3.0 mA

Standby

Sleep

Sleep

# Protocol lock

## Command syntax

300ms  processing delay

Plock,1 enable Plock

Plock,0 disable Plock

Plock,? Plock on/off?

Locks device to I<sup>2</sup>C mode.

default

## Example

## Response

Plock,1

 Wait 300ms  
1 0  
Dec Null

Plock,0

 Wait 300ms  
1 0  
Dec Null

Plock,?

 Wait 300ms  
1 ?Plock,1 0  
Dec ASCII Null

Plock,1

Baud, 9600

cannot change to UART

cannot change to UART

# I<sup>2</sup>C address change

## Command syntax

300ms  processing delay

I<sup>2</sup>C,n sets I<sup>2</sup>C address and reboots into I<sup>2</sup>C mode

## Example

## Response

I<sup>2</sup>C,101

device reboot  
(no response given)

## Warning!

Changing the I<sup>2</sup>C address will prevent communication between the circuit and the CPU until the CPU is updated with the new I<sup>2</sup>C address.

Default I<sup>2</sup>C address is 105 (0x69).

n = any number 1 – 127

I<sup>2</sup>C,101

(reboot)

# Factory reset

## Command syntax

Factory reset will not take the device out of I<sup>2</sup>C mode.

**Factory**    enable factory reset

I<sup>2</sup>C address will not change

## Example

## Response

**Factory**

device reboot  
(no response given)

Clears custom calibration  
LED on  
Response codes enabled

**Factory**

(reboot)

# Change to UART mode

## Command syntax

Baud,n switch from I<sup>2</sup>C to UART

### Example

Baud,9600

### Response

reboot in UART mode  
(no response given)

n = [ 300  
1200  
2400  
9600  
19200  
38400  
57600  
115200

Baud,9600

(reboot)

Changing to  
UART mode

# Manual switching to UART

- Disconnect ground (power off)
- Disconnect TX and RX
- Connect TX to ALM
- Confirm RX is disconnected
- Connect ground (power on)
- Wait for LED to change from Blue to Green
- Disconnect ground (power off)
- Reconnect all data and power

## Example

## Wrong Example

# Datasheet change log

## Datasheet V 1.6

Revised naming device info on pages 28 & 53.

## Datasheet V 1.5

Revised info for "Pin out" on page 8.

## Datasheet V 1.4

Added life expectancy to the cover page, and moved Default state to pg 11.

## Datasheet V 1.3

Added page about pointing the CO2 sensor at bright lights on pg 4.

## Datasheet V 1.2

Revised response for the sleep command in UART mode on pg 29.

## Datasheet V 1.1

Added more information on the Export calibration and Import calibration commands.

## Datasheet V 1.0

New datasheet

# Firmware updates

V1.00 – (Sept 12, 2018)

- Initial release

V2.00 – (Jan 24, 2020)

- Changes the lamp power supply to 5V with boost converter, stops CO2 readings from going below 0.

V2.01 – (Nov 06, 2020)

- Adjusts lamp frequency to fit the lamp signal into the ADC range more consistently.

# Warranty

Atlas Scientific™ Warranties the EZO-CO2™ Embedded NDIR CO2 Sensor to be free of defect during the debugging phase of device implementation, or 30 days after receiving the EZO-CO2™ Embedded NDIR CO2 Sensor (which ever comes first).

## The debugging phase

The debugging phase as defined by Atlas Scientific™ is the time period when the EZO-CO2™ Embedded NDIR CO2 Sensor is connected into a bread board, or shield. If the EZO-CO2™ Embedded NDIR CO2 Sensor is being debugged in a bread board, the bread board must be devoid of other components. If the EZO-CO2™ Embedded NDIR CO2 Sensor is being connected to a microcontroller, the microcontroller must be running code that has been designed to drive the EZO-CO2™ Embedded NDIR CO2 Sensor exclusively and output the EZO-CO2™ Embedded NDIR CO2 Sensor data as a serial string.

**It is important for the embedded systems engineer to keep in mind that the following activities will void the EZO-CO2™ Embedded NDIR CO2 Sensor warranty:**

- Soldering any part to the EZO-CO2™ Embedded NDIR CO2 Sensor.
- Running any code, that does not exclusively drive the EZO-CO2™ Embedded NDIR CO2 Sensor and output its data in a serial string.
- Embedding the EZO-CO2™ Embedded NDIR CO2 Sensor into a custom made device.
- Removing any potting compound.

# Reasoning behind this warranty

Because Atlas Scientific™ does not sell consumer electronics; once the device has been embedded into a custom made system, Atlas Scientific™ cannot possibly warranty the EZO-CO2™ Embedded NDIR CO2 Sensor, against the thousands of possible variables that may cause the EZO-CO2™ Embedded NDIR CO2 Sensor to no longer function properly.

## Please keep this in mind:

- 1. All Atlas Scientific™ devices have been designed to be embedded into a custom made system by you, the embedded systems engineer.**
- 2. All Atlas Scientific™ devices have been designed to run indefinitely without failure in the field.**
- 3. All Atlas Scientific™ devices can be soldered into place, however you do so at your own risk.**

Atlas Scientific™ is simply stating that once the device is being used in your application, Atlas Scientific™ can no longer take responsibility for the EZO-CO2™ Embedded NDIR CO2 Sensor continued operation. This is because that would be equivalent to Atlas Scientific™ taking responsibility over the correct operation of your entire device.
