

EZO-HUMTM

Embedded Humidity Circuit

Reads	Relative humidity Dew point Air temperature
Range	0 – 100%
Calibration	Factory calibrated
Response time	1 reading per second <small>(UART mode)</small> 1 reading per 300 milliseconds <small>(I2C mode)</small>
Accuracy	+/- 2%
Data protocol	UART & I²C
Default I2C address	111 (0x6F)
Operating voltage	3.3V – 5V
Data format	ASCII

STOP

SOLDERING THIS DEVICE VOIDS YOUR WARRANTY.

This is sensitive electronic equipment. Get this device working in a solderless breadboard first. Once this device has been soldered it is no longer covered by our warranty.

This device has been designed to be soldered and can be soldered at any time. Once that decision has been made, Atlas Scientific no longer assumes responsibility for the device's continued operation. The embedded systems engineer is now the responsible party.

Get this device working in a solderless breadboard first!

Do not embed this device without testing it in a solderless breadboard!

Attention

The EZO-HUM™ is 100% operational out of the box.
CALIBRATION IS UNNECESSARY

Direct sunlight will heat the circuit above the air temperature, making the readings incorrect.

A small amount of heating can have a noticeable change to the humidity readings.

For higher accuracy, don't do this.

Don't do that

EZO™ circuit dimensions

Power consumption

	LED	MAX	SLEEP
5V	ON	2.6 mA	0.5 mA
	OFF	2.4 mA	
3.3V	ON	2.2 mA	0.3 mA
	OFF	2.0 mA	

Absolute max ratings

Parameter	MIN	TYP	MAX
Storage temperature	-30 °C		75 °C
Operational temperature	-20 °C	25 °C	50 °C
VCC	3.3V	3.3V	5.5V

Calibration theory

The Atlas Scientific EZO-HUM™ Embedded Humidity Circuit comes pre-calibrated. The factory calibration data is permanently stored in the circuit and cannot be erased.

Custom calibration

This circuit does not require recalibration, and does not offer onboard custom calibration.

O,T,1 / O,T,0 <cr>

O,Dew,1 / O,Dew,0 <cr>

O,? <cr>

Response

*OK <cr> enable / disable humidity

*OK <cr> enable / disable temperature

*OK <cr> enable / disable dew point

?,O,HUM,T,Dew <cr> if all enabled

Parameters

Hum Humidity
T Air temperature in °C
Dew Dew point

Followed by 1 or 0

1 enabled
0 disabled

* If you disable all possible data types your readings will display "no output".

Naming device

Command syntax

Do not use spaces in the name

Name,n <cr> set name

Name, <cr> clears name

Name,? <cr> show name

n =

1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16

Up to 16 ASCII characters

Example

Response

Name, <cr>

*OK <cr> name has been cleared

Name,zzt <cr>

*OK <cr>

Name,? <cr>

?Name,zzt <cr>
*OK <cr>

Name,zzt <cr>

  Device Firmware
```

Response codes

Command syntax

- *OK,1** <cr> enable response **default**
- *OK,0** <cr> disable response
- *OK,?** <cr> response on/off?

Example

Response

R <cr>

57.38 <cr>
***OK** <cr>

***OK,0** <cr>

no response, ***OK** disabled

R <cr>

57.38 <cr> ***OK** disabled

***OK,?** <cr>

?*OK,1 <cr> or **?*OK,0** <cr>

Other response codes

- *ER** unknown command
- *OV** over volt ($VCC \geq 5.5V$)
- *UV** under volt ($VCC \leq 3.1V$)
- *RS** reset
- *RE** boot up complete, ready
- *SL** entering sleep mode
- *WA** wake up

These response codes cannot be disabled

Reading device status

Command syntax

Status <cr> voltage at Vcc pin and reason for last restart

Example

```
Status <cr>
```

Response

```
?Status,P,5.038 <cr>  
*OK <cr>
```

Response breakdown

?Status,	P,	5.038
	↑	↑
	Reason for restart	Voltage at Vcc

Restart codes

P	powered off
S	software reset
B	brown out
W	watchdog
U	unknown

Sleep mode/low power

Command syntax

Send any character or command to awaken device.

Sleep <cr> enter sleep mode/low power

Example

Response

Sleep <cr>

*OK <cr>

*SL <cr>

Any command

*WA <cr> wakes up device

cannot change to I²C

*ER <cr>

Short

cannot change to I²C

Factory reset

Command syntax

Factory <cr> enable factory reset

Example

Factory <cr>

Response

*OK <cr>

Factory <cr>

*OK <cr>

*RS <cr>

*RE <cr>

Baud rate will not change

Change to I²C mode

Command syntax

Default I²C address 111 (0x6F)

I2C,n <cr> sets I²C address and reboots into I²C mode

n = any number 1 – 127

Example

Response

I2C,100 <cr>

*OK (reboot in I²C mode)

Wrong example

Response

I2C,139 <cr> n ≠ 127

*ER <cr>

I2C,100

(reboot)

Green
*OK <cr>

Blue
now in I²C mode

Manual switching to I²C

- Disconnect ground (power off)
- Disconnect TX and RX
- Connect TX to PGND
- Confirm RX is disconnected
- Connect ground (power on)
- Wait for LED to change from **Green** to **Blue**
- Disconnect ground (power off)
- Reconnect all data and power

Manually switching to I²C will set the I²C address to 111 (0x6F)

Example

Wrong Example

I²C mode

The I²C protocol is *considerably more complex* than the UART (RS-232) protocol. Atlas Scientific assumes the embedded systems engineer understands this protocol.

To set your EZO™ device into I²C mode click [here](#)

Settings that are retained if power is cut

- Calibration
- Change I²C address
- Hardware switch to UART mode
- LED control
- Protocol lock
- Software switch to UART mode

Settings that are **NOT** retained if power is cut

- Sleep mode

I²C mode

I²C address (0x01 – 0x7F)

Largest string 22 characters

Sending commands to device

Example

Advanced

Requesting data from device

Advanced

Response codes & processing delay

After a command has been issued, a 1 byte response code can be read in order to confirm that the command was processed successfully.

Reading back the response code is completely optional, and is not required for normal operation.

Example

```
I2C_start;  
I2C_address;  
I2C_write(EZO_command);  
I2C_stop;
```

`delay(300);`

Processing delay

```
I2C_start;  
I2C_address;  
Char[ ] = I2C_read;  
I2C_stop;
```

If there is no processing delay or the processing delay is too short, the response code will always be 254.

Response codes

Single byte, not string

- 255** no data to send
- 254** still processing, not ready
- 2** syntax error
- 1** successful request

Firmware updates

V1.0 – Initial release (November, 2021)

Warranty

Atlas Scientific™ Warranties the EZO-HUM™ Embedded Humidity Circuit to be free of defect during the debugging phase of device implementation, or 30 days after receiving the EZO-HUM™ Embedded Humidity Circuit (which ever comes first).

The debugging phase

The debugging phase as defined by Atlas Scientific™ is the time period when the EZO-HUM™ Embedded Humidity Circuit is connected into a bread board, or shield. If the EZO-HUM™ Embedded Humidity Circuit is being debugged in a bread board, the bread board must be devoid of other components. If the EZO-HUM™ Embedded Humidity Circuit is being connected to a microcontroller, the microcontroller must be running code that has been designed to drive the EZO-HUM™ Embedded Humidity Circuit exclusively and output the EZO-HUM™ Embedded Humidity Circuit data as a serial string.

It is important for the embedded systems engineer to keep in mind that the following activities will void the EZO-HUM™ Embedded Humidity Circuit warranty:

- **Soldering any part to the EZO-HUM™ Embedded Humidity Circuit.**
- **Running any code, that does not exclusively drive the EZO-HUM™ Embedded Humidity Circuit and output its data in a serial string.**
- **Embedding the EZO-HUM™ Embedded Humidity Circuit into a custom made device.**
- **Removing any potting compound.**

Reasoning behind this warranty

Because Atlas Scientific™ does not sell consumer electronics; once the device has been embedded into a custom made system, Atlas Scientific™ cannot possibly warranty the EZO-HUM™ Embedded Humidity Circuit, against the thousands of possible variables that may cause the EZO-HUM™ Embedded Humidity Circuit to no longer function properly.

Please keep this in mind:

- 1. All Atlas Scientific™ devices have been designed to be embedded into a custom made system by you, the embedded systems engineer.**
- 2. All Atlas Scientific™ devices have been designed to run indefinitely without failure in the field.**
- 3. All Atlas Scientific™ devices can be soldered into place, however you do so at your own risk.**

Atlas Scientific™ is simply stating that once the device is being used in your application, Atlas Scientific™ can no longer take responsibility for the EZO-HUM™ Embedded Humidity Circuit continued operation. This is because that would be equivalent to Atlas Scientific™ taking responsibility over the correct operation of your entire device.
