

Activating FlowArm PLTW as Administrator

When following the normal FlowArm PLTW installation instructions, the Activation process will only be done for the current user. If you would like to activate FlowArm PLTW for all users on a computer, please follow these steps.

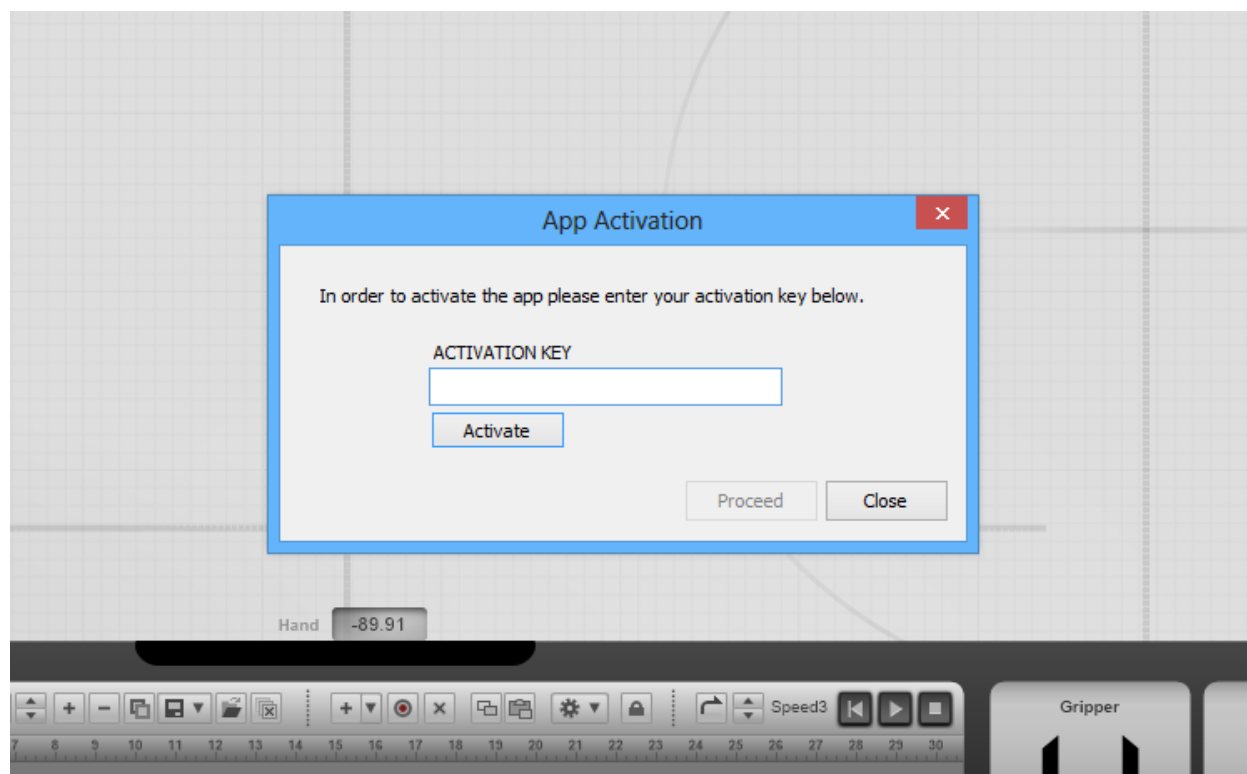

After downloading the installation file, run the installer and follow all the steps. On the last step, you will be asked if you want to run FlowArm PLTW immediately.

When you see this screen, uncheck the "Run FlowArm PLTW" box and click Finish.

From the Start Menu, find the new FlowArm PLTW shortcut, right-click on it, and choose "Run as administrator".

When FlowArm PLTW opens, you will be prompted for the activation key:

Enter the license key that you were provided, click Activate, and click Proceed. FlowArm PLTW will now be activated for all users on your computer.

To verify everything works well, log out of your computer and login as another user.

If you have any issues with this process, or have already activated the software as a regular user, please contact us for additional support:
