

# Tibbit Module

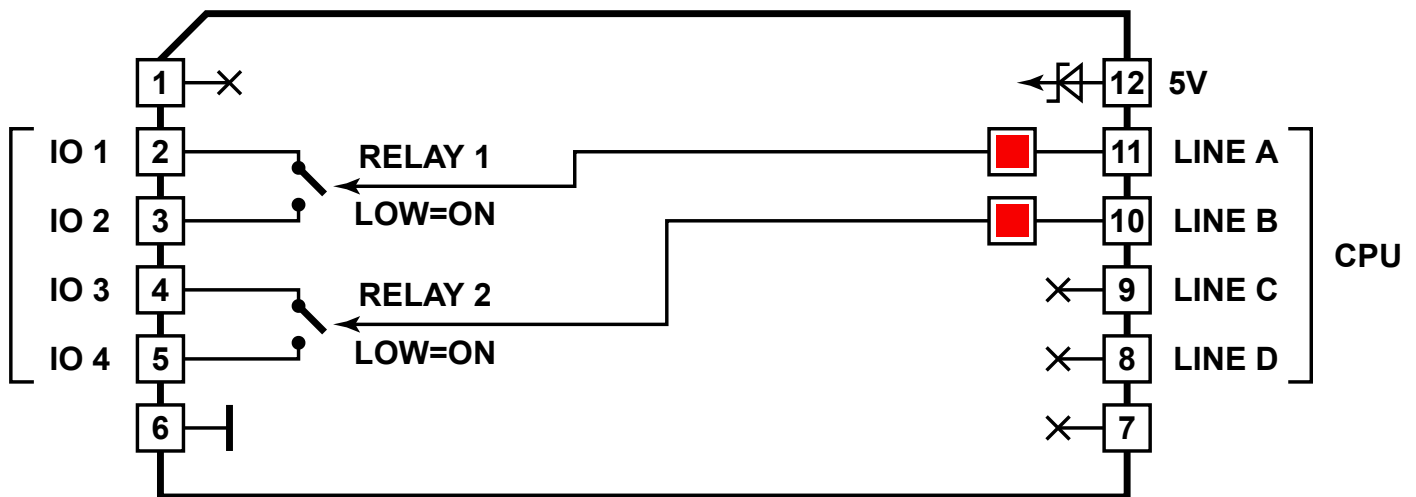

## #03<sub>1</sub>

M1S

Two low-power relays (configuration 1)

Two mechanical low-power relays with independent normally opened terminals.

**Form:** M1S

**Power:**

- 5V - Consumes 60mA

**Mates with:** #19, #20, #21

### Details

These relays are rated for 1A/30V.

To activate a relay, set the corresponding control line LOW. When left unconnected, control lines default to HIGH (and, hence, relays are off).

Combine this Tibbit with terminal block devices — #20 (nine terminal blocks) or #21 (four terminal blocks).

## LEDs

There are two red LEDs which are connected to two relay control lines. LEDs light up for the LOW state of control lines (i.e. when relays are activated).
