open·air ™
Automatic Self-Cleaning Litter Box

Setting up your Litter-Robot *Open Air*™

Step 1: After removing unit from box make sure to remove cardboard spacer between Bonnet and Globe.

Step 2: Locate Power Supply in pocket of top cardboard insert. Locate Instruction Manual and keep in a safe place.

Step 3: Find a convenient electrical outlet and location for the Litter-Robot – the cord is 6 feet long.

Step 4: Position the Litter-Robot on a flat and sturdy surface within range of an electrical outlet.

Note: The Litter-Robot may be used on carpeted surfaces, but the Cat Sensor sensitivity may be slightly reduced.

Step 5: Add clumping litter. Pour 10 lbs. (weight) or approximately 1 1/2 gallons (volume) of litter into the Globe by pouring into the entry/opening. You may also use one of the cardboard corner braces from the original packaging as a trough/funnel for the initial fill.

Step 6: Spread litter flat in bottom of Globe and verify that litter does not exceed the raised Fill Line.

Step 7: Plug in Power Supply (15VDC Adapter) at electrical outlet and insert small plug end into socket at rear of unit.

Step 8: Press the Power Button. Globe will start to rotate counter clock-wise with Yellow LED illuminated indicating the unit is running a clean cycle. Wait for the unit to complete the clean cycle (takes approxi–mately 2 1/2 minutes). Blue LED will illuminate after unit completes clean cycle indicating it is ready for use.

Note: If upon pressing the power button, the Globe starts but then stops and the Red LED starts to flash, there is too much weight in the unit. Check that you have not over filled the Globe, and check to make sure nothing is in the Waste Drawer. Remove excess litter or weight and then press the Reset Button to continue the clean cycle.

Fault Indicators

Flashing sequentially: Motor obstructed or jammed.

Flashing sequentially: Unit cannot find the dump position.

Flashing sequentially: Unit cannot find home position.

Flashing at same time: Unit cannot find dump or home position.

What do the lights mean?

Blue

Illuminated: Waiting and ready for use.

Flashing: Time to empty – Waste Drawer is full!

Action Needed:
Pressing the (reset) Button will cancel Drawer Full Indication and Blue LED will be illuminated.

Yellow

Illuminated: Unit is running a clean cycle.
Note: Yellow LED will remain illuminated when the clean cycle is paused by pushing any of the three buttons.

Flashing 1x per Second:
1. Bonnet has been removed, or
2. Cat Sensor was activated during clean cycle.

Action Needed:
Pressing the (reset) Button will continue to pause the unit with Yellow LED illuminated.

Pressing the (cycle) Button will then continue the clean cycle.

Pressing (empty) or (reset) Buttons will abort the clean cycle and return the Globe to home position.

Flashing 2x per second: Pinch Detect was activated.

Action Needed:
Pressing the (reset) Button will cancel this mode and send Globe to home position.

Red

Illuminated: Cat Sensor was activated while unit was ready and waiting for use. Wait-time *(standard 7 minutes)* in process.

Action Needed:
Pressing the (reset) Button will cancel the Cat Sensor timer, reset the baseline, and the Blue LED will then be illuminated.

Flashing:
1. Too much weight in the unit, or
2. Cat Sensor activated continuously for more than 2 minutes *(cat won't leave unit).*

Action Needed:
Pressing the (reset) Button will cancel the fault mode assuming excessive weight has been removed. Unit will either continue clean cycle with Yellow LED illuminated, or return to Blue LED illuminated if unit was originally in home position

Power Button
Illuminated: Unit operating in Battery Backup mode.

Blue and Yellow
Illuminated: Unit is in 8 hour lock–out mode.
