

RB-Sbo-111

GM23 - Tiny Geared Motor w/ Offset Shaft

Description

Use this tiny lightweight gear motor for crazy things like wall climbing robots, automatic tooth-brushing, or fancy marble machines. These would also be great for competition Micro Sumobots or any other mini-robot for that matter. Make a robot so small that it can fit inside another robot.

This 1:192 Tiny Geared Pager Motor has an offset shaft much like the GM2, but is roughly half the size in every dimension.

Specifications

- Gear Ratio: 1:192
- Operating Voltage: 3.0V
- Current draw (no load): 30 - 80mA
- RPM (no load): 100 - 410 rpm
- Output Torque: 0.06 - 0.48Kgf.cm
- Weight: 3.7 g
