When Design Meets Performance...

# Born For You

At ZOHD we take very seriously the feedback from our fans and friends around the world. Dart XL Extreme was our answer to all those pilots who loved their ZOHD Dart but wanted something bigger, more flexible, more reliable for longer distances and with huge potential to mod.

Instead of going the easy way and just scale up our highly acclaimed Dart, we raised the bar even higher: We decided to create from scratch the best swept-forward FPV wing ever made, with all the features that our fans will love to see.

# Features

- Precision is the name of the game: Thanks to its revolutionary and careful design, the plane performs and looks like no other wing in the market.
- Small size airframe optimized for long range and portability... not to mention the COOL factor!
- Carefully chosen airfoil gives the aircraft an incredible lift power and excellent handling
- Detachable wing and vertical fins make it portable for an easy transport and deploy
- Keeping the tradition: Dart means swept-forward wing and swept-forward wing means stylish design and natural stability in turns and low speeds
- Fly Green: New ZOHD's exclusive BEPP material isn't only crash resistance, but even more important: 100% biodegradable. Future generations will thank you for that.
- Light-weight composite hard nose for better protection of your expensive camera gear
- Multi-camera nose: Compatible with 99% of the FPV and HD cameras in the market: Runcam HD, 2, 3S, Swift, Split, GoPro H4-5-6-7, Session and much more!
- Reversed wingtips, provide more lift force and ensure a super efficient wing surface
- Vortex generators for improving lift efficiency and gain higher control at low speeds. Use them straight and you will have even better Yaw stability!
- Load it as much you want with a huge equipment bay!
- Computer designed optimized air flow pod, that maximizes cooling, reducing the risk of crashes for overheated electronics
- Impact resistant protection cover for main wings leading edge and landing skids
- Built-in carbon fiber tube inside main wings for enhanced performance and rigidity
- Exclusive VTX / RX bays with excellent air flow and away from interferences
- Full spare parts supply, worry free fun. Fly it like you stole it!

# MKII: Stepping up the Game

Away from our initial debut in the RC world, ZOHD has evolved into a mature, committed and responsible company.

The DART XL “Extreme” kicks-off our new series called MKII. This series will feature an incredible set of high quality and ORIGINAL innovations, intended to give you the ultimate FPV aircraft for mid and long range.

Without cutting any corners we went straight ahead with 100% biodegradable and environmentally friendly materials, metal gear servos, high quality power plants, protection for leading edges and skids, vortex generators, revolutionary multi-cam hard noses and much, much more.

This is it! ZOHD Dart XL Extreme is ready to hit the skies around the world, and this is just the beginning... join us in this incredible adventure.

# Specifications

- Material: Biodegradable BEPP
- Wingspan: 1000mm (39.37")
- Length: 596mm (23.46")
- Flying speed: 25-100+km/h
- Motor: 2216-1300KV
- ESC: 30A w/5V 3A BEC
- Servos: 9g Metal Gear Digital
- Prop: 9X4.5
- Recommended Battery: 4S 3300mAh
- Wing area: 19.8dm<sup>2</sup>
- Wing load: 60.6g/dm<sup>2</sup> (Max.)
- Recommended Max. Flying weight: 1200g
- Max. Flying time: 40 minutes (with recommended battery)
