

What is HEXA?

Hello, Human! Say hi to HEXA.

HEXA is a six-legged robot designed to handle all sorts of terrain. You can write programs (called [Skills](#)) to control HEXA and also control the robot by using your mobile device as a remote.

We like to think of HEXA as the "living being." It can dance, climb, cross gaps, crawl, and more.

Here are some of the features that HEXA provides:

- 3 axis accelerometer to stay balanced
- distance sensor to detect objects
- infrared sensor for night vision

You can find out more about HEXA's internals on our [Hardware](#) page.
